RitePolish Becomes Clarity

www.chela.co.uk

CHELA

Technical Bulletin

The Ritec RitePolish has now been replaced with a new improved formula called “Clarity”.

Why the Rebrand

Formula improvement is imbedded with the Chela's DNA. We constantly strive to improve our formulas to ensure that our chemistry remains current, innovative and best in class. Clarity is the new improved version of Ritec's RitePolish. Extensive in-house research and development has been executed to ensure that the new formula (Clarity) will provide improved overall performance.

Clarity vs RitePolish

You should expect to see improved performance when using Clarity

1. Improved removal of swirl marks and imperfections
2. Reduction in cleaning times due to improved performance
3. Water based chemistry to ensure safety
4. Low spatter for easy-clean up
5. Multi-application friendly – use on all types of glass

Clarity Technical Datasheet

Clarity takes off all dirt and contamination from the glass surface and leaves behind a flat hydrophilic finish. Delivers rapid restoration and a clear polished finish to glass surfaces. Clarity is a high-performance cerium oxide polishing compound developed for the professional restoration of glass. It removes light scratches, mineral scale, water spotting and ingrained contamination while restoring optical clarity and smoothness. Easy and quick to use, it works effectively on architectural glass, shower screens, automotive glass and other smooth glass surfaces. The controlled abrasive system provides efficient polishing while maintaining safe and predictable cutting action. The water-based formulation allows easy application and simple clean-up. A professional compound designed to restore clarity and deliver a high-quality polished finish

Key Features

- Removes dirt, light scratches and swirl marks
- Eliminates mineral scale and water spotting
- Restores optical clarity and transparency
- Controlled abrasive polishing action
- Quick and easy to apply
- Water based formulation
- Easy clean-up after use
- Suitable for a wide range of glass surfaces
- Glass scratch removal and restoration
- Shower screens and bathroom glass
- Windows and architectural glass panels
- Automotive glass and windscreens
- Commercial and residential glass surfaces

Specification

- Appearance: Smooth polishing paste
- Colour: Off white
- Viscosity: 7,000 – 9,000 cps
- pH: 7.5 – 8.5
- Odour: Mild
- Active Abrasive: Cerium Oxide

Method

Clarity may be used both in polishing machines and by hand. Follow the machine supplier's guidance when using polishing equipment. For manual use, apply a small quantity to a microfiber cloth, felt pad or polishing pad and agitate using circular motions. Don't over apply. Maintain slight moisture if required to assist polishing. Buff dry with a clean microfiber cloth to reveal a clear polished finish.
