

Mirror Suspension System VITOFIX PLUS II

It's so easy ...

The self-adhesive connection

With this self-adhesive suspension system you can fix mirrors in a fast, reliable and invisible way, even in bathrooms or in rooms with indoor pools. The special adhesives provide a high initial and final strength. Please also observe our instructions for processing adhesive tapes.

If the stipulated dimensions are exceeded, use VITOFIX PLUS I instead. Do not use more than one VITOFIX set per mirror. For special applications, please contact VITO.

Self-adhesive products

Mounting guidelines

Grease, oil, and release agents prevent a proper bonding of pressure sensitive adhesives. Therefore the back of the mirror has to be thoroughly cleaned with a cleaning solvent like denatured alcohol before attaching the metal sheets. Use a clean cloth or a pad of cellulose paper, soak it with alcohol, clean the surface and then immediately rub away any residue with a second clean and dry pad. Other cleaners may only be used if there are definitely no tensides (i.e., surfactants / surface-active agents) included. When working with flammable solvents, carefully observe the safety instructions printed on the container label. Aerate the room to allow the solvent to evaporate completely. Give some time for the surface to warm up to room temperature which should be +18 °C as a minimum. For a good adhesion, the surface must be clean and dry. If moisture from the air condensates on a cold surface, the adhesive will not work. Silicon spray must not be used in rooms where you work with VITOFIX PLUS II.

Never touch the adhesive surface. **Press on the metal sheets strongly and uniformly.** The mirror may then be fixed to the wall immediately. To secure a high initial strength, both the mirror and its suspension need to have a temperature of +18 °C minimum. Once this is done correctly, the strength of the connection will also remain at temperatures below 0 °C. Prior to bonding a mirror with a splinter protection film on its back, please ask VITO for approval, otherwise no liability will be accepted.

**Material requirement for 12 kg of mirror weight
(0.8 m² mirror surface at 6 mm glass thickness): One set**

One set VITOFIX PLUS II consists of
2 self-adhesive mirror holders, 2 wall hooks, 2 distance pads
The distance pads are double-sided self-adhesive. If necessary, remove the film to obtain an additional connection with the wall.
