1 INTRODUCTION

Lucideon were commissioned by the client, Q-railing Europe GmbH and Co KG, to carry out load testing in accordance with BS 6180:2011 Barriers in and about buildings, to allow their balustrade system to be classified for use in accordance with the Code of Practice included within the standard.

The testing was carried out at Q-railing Europe GmbH and Co KG's facilities at 8-14 Marie-Curie Straße 46446 Emmerich am Rhein Germany.

This report summarises the test results obtained during the test programme and does not provide interpretation of those results.

2 TEST SAMPLES

The aluminium channel tested was designated as Easy Glass Pro-Y Fascia Mounted Fixed. The system is shown in Figure 1.

The channel was installed by Q-railing personnel.

3 TEST PROGRAMME

A horizontal line load was applied to the aluminium channel with the following glass types installed:

- Laminated VSG Glass 16.76 mm – size (w x h):1000 mm x 1200 mm.
- Laminated VSG Glass 21.52 mm – size (w x h):1000 mm x 1200 mm.
- Laminated Sentry Glass 20.04 mm – size (w x h): 1000 mm x 1300 mm.
- Monolithic ESG Glass 19 mm – size (w x h): 1000 mm x 1200 mm.
- Monolithic ESG Glass 15 mm – size (w x h): 1000 mm x 1200 mm.

4 TEST METHOD

The channel was bolted to the side of a concrete block, which was fixed to the floor of the test facility. The 1.0 m length of channel was bolted to the block at 200 mm centres by the client using the appropriate fixings.

The appropriate thickness glass panel was fitted into the channel using the 'Safety Wedge' fixing clips at four clips per metre such that the plastic clip was to the inside face of the glass (see Figures 2 and 3).

A horizontal imposed line load was applied to the glass at a height of 1.1 m above the datum level of the floor and the deflection measured at the top central point of the panel 1.1 m above the datum level of the floor. The load was applied via a hydraulic ram and the deflection measured using a linear voltage displacement transducer (see Plate 1).

5 RESULTS

The test was carried out in accordance with the guidance given in BS 6180 Barriers in and about buildings – Code of Practice. The standard states that the maximum allowable deflection for a free standing glass protective barrier panel is 25 mm.

Table 2 of BS 6180 Barriers in and about buildings – Code of Practice categorises parapets, barriers and balustrades for areas of use depending on the loads they have achieved under testing.

The loads achieved by the Q-railing Europe GmbH and Co KG glazing system tested under horizontal imposed line load to the maximum deflection of 25 mm are given in Table 1.

All figures quoted in Table 1 contain no safety factors and are direct loads as achieved by the system under test conditions.

Table 2 summarises the suitability of the tested systems in accordance with Table 2 of BS 6180:2011.

NOTE: The results given in this report apply only to the samples that have been tested.

END OF REPORT

Table 1: Summary of Performance of Q-railing Europe GmbH and Co KG Balustrade System Tested under Horizontal Imposed Line Load

Base Rail	Glass	Imposed Line Load at 25 mm Deflection (kN/m)	Working Line Load for System (kN/m)	Deflection at Working Line Load for System (mm)
System	Laminated VSG Glass 16.76 mm	0.68	0.36	11.53
	Laminated VSG Glass 21.52 mm	0.93	0.74	18.90
	Laminated Sentry Glass 20.04 mm	1.62	1.50	21.96
	Monolithic ESG 19 mm	1.55	1.50	23.47
	Monolithic ESG 15 mm	1.15	0.74	14.67

Table 2: Summary of Suitability of Q-railing Europe Systems in Accordance with Table 2 of BS 6180:2011

Type of Occupancy for Part of the Building	Examples of Specific Use	Horizontal Uniformly Distributed Line Load (kN/m)	Easy Glass Pro-Y Fascia Mount Fixed				
			16.76 mm	21.52 mm	20.04 mm	19 mm	15 mm
Domestic and residential activities	(i) all areas within or serving exclusively one single family dwelling including stairs, landings, etc but excluding external balconies and edges of roofs	0.36	✓	✓	✓	✓	✓

1 INTRODUCTION

Lucideon were commissioned by the client, Q-railing Europe GmbH and Co KG, to carry out load testing in accordance with BS 6180:2011 Barriers in and about buildings, to allow their balustrade system to be classified for use in accordance with the Code of Practice included within the standard.

The testing was carried out at Q-railing Europe GmbH and Co KG's facilities at 8-14 Marie-Curie Straße 46446 Emmerich am Rhein Germany.

This report summarises the test results obtained during the test programme and does not provide interpretation of those results.

2 TEST SAMPLES

The aluminium channel tested was designated as Easy Glass Pro-Y Fascia Mount Adjustable. The system is shown in Figure 1.

The channel was installed by Q-railing personnel.

3 TEST PROGRAMME

A horizontal line load was applied to the aluminium channel with the following glass types installed:

- Laminated VSG Glass 21.52 mm – size (w x h): 1000 mm x 1200 mm.
- Laminated Sentry Glass 20.04 mm – size (w x h): 1000 mm x 1300 mm.
- Monolithic ESG Glass 19 mm – size (w x h): 1000 mm x 1200 mm.
- Monolithic ESG Glass 15 mm – size (w x h): 1000 mm x 1200 mm.

4 TEST METHOD

The channel was bolted to the side of a concrete block, which was fixed to the floor of the test facility. The 1.0 m length of channel was bolted to the block at 200 mm centres by the client using the appropriate fixings (see Figure 2).

The appropriate thickness glass panel was fitted into the channel using the 'Adjustable Wedges' at four wedges per metre top and bottom (see Figures 1 and 3).

A horizontal imposed line load was applied to the glass at a height of 1.1 m above the datum level of the floor and the deflection measured at the top central point of the panel 1.1 m above the datum level of the floor. The load was applied via a hydraulic ram and the deflection measured using a linear voltage displacement transducer (see Plate 1).

5 RESULTS

The test was carried out in accordance with the guidance given in BS 6180 Barriers in and about buildings – Code of Practice. The standard states that the maximum allowable deflection for a free standing glass protective barrier panel is 25 mm.

Table 2 of BS 6180 Barriers in and about buildings – Code of Practice categorises parapets, barriers and balustrades for areas of use depending on the loads they have achieved under testing.

The loads achieved by the Q-railing Europe GmbH and Co KG glazing system tested under horizontal imposed line load to the maximum deflection of 25 mm are given in Table 1.

All figures quoted in Table 1 contain no safety factors and are direct loads as achieved by the system under test conditions.

Table 2 summarises the suitability of the tested systems in accordance with Table 2 of BS 6180:2011.

NOTE: The results given in this report apply only to the samples that have been tested.

END OF REPORT

Table 1: Summary of Performance of Q-railing Europe GmbH and Co KG Balustrade System Tested under Horizontal Imposed Line Load

Base Rail	Glass	Imposed Line Load at 25 mm Deflection (kN/m)	Working Line Load for System (kN/m)	Deflection at Working Line Load for System (mm)
System	Laminated VSG Glass 21.52 mm	1.14	0.74	12.36
	Laminated Sentry Glass 20.04 mm	1.62	1.50	21.96
	Monolithic ESG 19 mm	0.92	0.74	17.74
	Monolithic ESG 15 mm	0.74	0.74	25.00
